PRILOG II

MJERE INTEGRIRANE ZAŠTITE ŠUMA ZA
SPRJEČAVANJE ŠIRENJA I SUZBIJANJE ŠETNOG
ORGANIZMA *Ips typographus* (L.) – osmerozubi
smrekin pisar

A: Intenzivni monitoring feromonskim klopama

Uspostava mreže feromonskih klopki na kojima se u tjednim razmacima obavlja kontrola naleta potkornjaka kako bi se kvalitetno mogli uskladiti ostali segmenti aktivne borbe protiv potkornjaka. U kontekstu ovog izvanrednog stanja i napora u zaustavljanju gradacije potkornjaka na području Gorskog kotara ne radi se o *monitoringu per se* već o interventnom monitoringu čija je jedina zadaća pot-

pomoći (vremenski optimizirati) provedbu ostalih mjera (doznaka, sječa i izrada, polaganje lovnih stabala, izvoz, itd) potrebno je pravovremeno nabaviti dostatne količine feromona i klopki da se ne propušta početak prvog rojenja potkornjaka.

Gustoća, raspored i vrijeme postavljanja feromonskih klopki: Klopke rasporediti tako da dobro pokrivaju visinsku zonaciju smrekovih sastojina područja zahvaćenog gradacijom potkornjaka. Gustoća po jedinici površine (sastojine) nije presudna i može biti razmjerno rijetka. Visinska gustoća treba biti takva da na svakih 200 visinskih metara u svakoj gospodarskoj jedinici u kojoj postoji kalamitet budu postavljene po dvije klopke. Mjesto postavljanja klopki treba biti u konzultaciji sa stručnjacima Hrvatskog šumarskog instituta. Podaci tjednih ulova unose se u sustav www.stetnici.hr unutar Izvještajno prognoznih poslova.

Feromonske klopke treba postaviti (montirati klopke i opremiti feromonskim dispenzerima namijenjenih ulovu smrekovog pisara) u najnižim lokacijama do 1. travnja, a u najvišim lokacijama najkasnije do 15. travnja. Uvažavajući realna terenska ograničenja u smislu nedostupnih šumskih predjela u višim nadmorskim visinama, postaviti barem jednu klopku uz samu šumsku cestu (čim se vozilom probije snježni zapuh) do 15. travnja radi određivanja vremena naleta prvih potkornjaka i njihova najranijeg napada. Prilikom odabira mikrolokacije potrebno je klopke postavljati na udaljenosti minimalno 25 m od prvih zdravih smreka. Feromon se mora promijeniti prema uputama proizvođača, u pravilu kada se ampula isprazni. Svaki tjedan klopke se moraju isprazniti te izbrojati ulovi. Broj uhvaćenih jedinki unosi se u elektronski manual koji će se izraditi unutar IPP platforme www.stetnici.hr.

B: Pravovremeno otkrivanje i doznaka napadnutih stabala

U potpunosti se fokusirati na sanaciju smreka koje u sebi još sadrže populaciju potkornjaka (koru koja ne otpada lako i teško se može oguliti golom rukom).

Dva su ključna načina pravovremenog otkrivanja napadnutih smreka:

- Kod smrekovih stabala potpuno zelenih krošanja
- Kod smrekovih stabala zelenih iglica u gornjem dijelu ili djelomično požutjelih iglica koje otpadaju ili živo crvenih iglica koje se osipaju, s korom ili djelomično otpalom korom

B.1. Smrekova stabla potpuno zelenih krošanja (iglica)

– nenapadnute (zdrave) od napadnutih (zaraženih) smreka prepoznaju se po smeđoj piljevini koja sipi niz deblo dok se imaga ubušuju i formiraju bračne komorice i materinske galerijske sustave (generalno travanj – svibanj i lipanj – kolovoz). Pored smeđe piljevine koja se nagomilava s gornje strane ljušaka kore i naročito na pridanku, okolnom zeljastom bilju ili paučini oko korijenova vrata, dodatni znak napada je smola koja curi niz deblo, najčešće kod stabala koja su iznimno vitalna, ali ipak osuđena na propast.

B.2. Smrekova stabla zelenih iglica u gornjem dijelu ili djelomično požutjelih iglica koje otpadaju ili živo crvenih iglica koje se osipaju, s korom ili djelomično otpalom korom

– ovakvi vanjski simptomi nastaju nakon što je prestala sipiti piljevina, ali je potkornjak još uvijek pod korom (ovisno od razdoblja godine, u različitim razvojnim stadijima – dominiraju stadiji ličinke, kukuljice i svijetlosmeđih imaga). Otkrivanje i doznačavanje je moguće tijekom cijele godine, a naročito u razdoblju rujana – ožujak sljedeće godine.

Doznačavanje stabala smreke zelenih iglica treba na terenu odvojiti od doznake očiglednih suhara (smreka bez kore i iglica) – uvođenjem posebne oznake (boje) i kodiranja u evidenciji doznake. Naravno, radi kvalitetnije kontrole poslova osigurati vođenje zasebnog

načina evidentiranja doznake u dva glavna razdoblja doznačivanja (primjerice, crvena u razdoblju od 1. travnja do 31. kolovoza i žuta u razdoblju 1. rujna do 31. ožujka).

Pravovremeno otkrivanje (doznačivanja) napadnutih smreka treba provoditi kontinuirano, tijekom cijele godine dok su sastojine dostupne vozilima i doznačivačima. Nastavno na pravovremenu doznaku mora slijediti i brza sanacija (sječa i izrada, manipulacija i dalje) doznačenih smreka, s bitnom razlikom u vremenu kad se ovo ima provesti (iznimno brzo u proljeće i ljeti, ali znatno sporije, s mogućnošću duljeg vremenskog odmaka, od 1. rujna tekuće do najkasnije 1. travnja sljedeće godine za doznaku načinjenu u tom razdoblju).

C: Pravovremena sječa i izrada doznačenih smreka

C.1. Sječa i izrada te daljnja manipulacija smreka doznačenih na temelju znakova ubušivanja (smeđa piljevina)

Nakon doznake zaraženih stabala mora se organizirati promptna sječa i privlačenje na pomoćna stovarišta i dalje (razlog je vrijeme ovog tipa doznake, a to je razdoblje travanj – kolovoz). Od prvog proljetnog ubušivanja do izlaska nove generacije potkornjaka iz kore napadnute smreke prolazi između 8 i 10 tjedana. Svježe doznačena smreka (prva doznaka u tekućoj godini) u posljednjem tjednu travnja 2017. mora se srušiti, izvući iz sastojine i otpremiti kamionskim prijevozom na sigurnu udaljenost (minimalno 10 km od najbližih smrekovih sastojina ili nekako drugačije sanirati) do konca svibnja 2017! Za proljetno razdoblje doznačivanja i sanacije dopušta se vremensko razdoblje od doznake do potpunog uklanjanja smreke iz sastojine od najviše 30 dana. Za doznaku (na temelju »ubušne piljevine«) tijekom lipnja i dalje ovaj se rok mora skratiti radi viših temperatura na 21 dan.

C.2. Sječa i izrada te daljnja manipulacija smreka doznačenih na temelju znakova promjene boje krošanja, osutosti i djelomičnog otpadanja kore

Smreke koje se naknadno pokazuju (nakon što su »pobjegle« ranoj detekciji po sipljenju smeđe piljevine) kao napadnute (u razdoblju od 1. rujna do konca zime naredne godine) mogu biti sanirane (rušene, izvučene i otpremljene) u znatno duljem razdoblju, a najkasnije do 1. travnja naredne godine.

D: Manipulacija posječenih napadnutih (doznačenih) smreka

D.1. Šumski red

- nakon sječe i izrade te izvlačenja doznačenih stabala treba uspostaviti šumski red slaganjem grana u hrpe s debljim dijelovima grana prema sredini hrpe na dnu koje leži usitnjena ovršina
- hrpe je potrebno formirati u većim dimenzijama (više stabala) kako bi se učinak »kompostiranja« u središtu intenzivirao
- prestanak prakse otkoravanja panjeva jer prema najnovijim istraživanjima oni predstavljaju neatraktivni supstrat za razvoj smrekova pisara (a predstavljaju dodatni vremenski i materijalni trošak u nizu mjera koja predlažemo)

D.2. Skladištenje na stovarištima u šumi smreke uz otkoravanje

- otkoravanje srušenih napadnutih smreka (kada je opravdano iz tehničkih razloga) na licu mjesta, ali uz obavezno dodatno tretiranje kore u kojoj se nalaze razvojni stadiji smrekova pisara:
 - o ako je smrekov pisar u stadiju jajeta, ličinke ili kukuljice (bijela faza) dovoljno je otkoravanje i izlaganje unutrašnjosti otkorane kore suncu
 - o ako je potkornjak pretežito u stadiju kukuljice, mladog imaga (svjetlosmeđe boje) potrebno je spaljivanje kore uz poštivanje sigurnosnih mjera

o ako je već došlo do formiranja imaga tamno smeđe boje – onda je koranje zakašnjelo

o ukoliko su trupci otkorani, izvoz, otprema i/ili prekrivanje trupca insekticidnom mrežom nisu potrebni s aspekta suzbijanja gradacije potkornjaka

- ukoliko je dostupna tehnologija, umjesto spaljivanja kore i uhrpavanja granjevine i ovršine može se koristiti i njihovo strojno usitnjavanje sitnilicama.

D.3. Prostorno izmicanje (uklanjanje) smreka čija je kora prepuna potkornjacima

Doznačene i na vrijeme srušene smreke, iz kojih će potkornjaci nedvojbeno izletjeti, izmknuti s područja u kojem vlada njihova gradacija tako da nakon izlijetanja ne mogu pronaći nove smrekove sastojine (skladištenje na udaljenim lokacijama, prodaja van područja pridolaska smreke, itd.). Važno je pritom striktno držati se gore navedenih rokova (sječa i izrada te daljnja manipulacija doznačenih stabala) pri čemu su rokovi u proljetno-ljetnom razdoblju 30 odnosno 21 dan (krajnji rok za dovršetak izmicanja stabala) dok su u jesensko-zimskom razdoblju produljeni do najkasnije 31. ožujka. Smisao je uvijek u tome da se smreka koja pod korom sadrži razvojne stadije potkornjaka izmakne iz zone rizika širenja gradacije prije njihova izlijetanja.

D.4. Skladištenje na stovarištima u šumi smreke uz prekrivanje insekticidnom mrežom

Insekticidna mreža se postavlja preventivno prije pojave štetnih kukaca od proljeća do jeseni. Ima brzo kontaktno djelovanje na insekte obzirom da se aktivna tvar nalazi na samoj površini mreže. U slučaju da su štetnici već prisutni u drvu, pokrivanjem mrežom sprječavamo njihov izlazak i širenje napada. Učinak mreže traje do 6 mjeseci. Mreža se može više puta upotrijebiti pod uvjetom da je ispravno skladištena. Veličina mreže: a) 50 m² za prekrivanje pojedinačnog debla; b) 100 m² za stovarišta za trupce, hrpa drva do najviše 19 m³; c) 200 m² za stovarišta za trupce, hrpa drva do najviše 38 m³.

Na oborena debla zaštićena insekticidnim sredstvom obavezno je postaviti upozoravajući natpis: »Mreža je tretirana insekticidnim sredstvom. Izbjegavati svaki dodir s kožom i odjećom, ne zadržavati se u neposrednoj blizini.«, odnosno sukladno posebnom propisu.

E: Dodatni postupci (dodatne opcije)

E.1. Lovna stabla (debla)

Ovdje se misli na dodatnu sječicu potpuno zdravih, najvitalnijih i nenapadnutih smreka u neposrednoj blizini žarišta koja se saniraju radi ciljanog ubušivanja potkornjaka u oblovinu koju smo sami odredili za njihov napad. Ovako srušene smreke postaju lovna stabla (debla, trupci), u njih se ubušuju potkornjaci i na njima se prati nalet (smeđa piljevina) nakon čega se s njima postupa isto kao i s pravovremeno doznačenim smrekama u prvom, proljetnom napadu (travanj – svibanj) – izvoz i uklanjanje (uhrpavanje + insekticidna mreža) najkasnije kroz 30 dana. Lovna stabla koristiti na većim žarištima te kao lovna stabla (debla) koristiti one smreke koje se nalaze u tzv. »sigurnosnom pojasu«.

Lovno stablo (debla, trupac) poželjno je da leži u polusjeni (zastor krošanja) ili se na otvorenom rahlo prekriva okresanim svježim granama. Bitno je da se kora zaštititi od prekomjernog zagrijavanja jer je tada potkornjaci izbjegavaju za ubušivanje.

E.2. Žarište i sigurnosni pojas

Najčešći naziv u praksi za veću ili manju grupu potkornjacima napadnutih smreka je »žarište« (rjeđe »gnijezdo«). Čine ga sve smreke
