Appendix 2

The U.S. Catch Documentation Scheme, as revised in 2019, is designed to issue a single form of catch certificate for export consignments from the United States to the European Union (EU) of fishery products, raw and processed.

On the U.S. catch certificate, U.S. exporters will be required to 1) list the single vessel responsible for the harvest of fish or fisheries products comprising the respective consignment with all of the applicable information required on the United States Attestation of Legal Catch; or 2) provide a vessel grouping name responsible for the harvest of fish or fisheries products comprising the respective consignment with all of the applicable information required on the United States Attestation of Legal Catch.

The grouping feature will be used for fisheries subject to significant commingling of catch at-sea or on-shore (for example, fisheries including but not limited to: those where initial catches are divided by size before further dispatch e.g., lobster; or those in which multiple harvest vessels deliver fish to tender vessels at sea).

Groupings will be managed by the U.S. producer or processor requesting the certificate and subject to audit. Reflecting current U.S. practices, the U.S. producer or processor will be responsible for retaining all information corresponding to the vessels or list of vessels which contributed to the consignment and providing that information to the U.S. Government competent authority upon request.

The single vessel or grouping feature will enable the United States to produce a single certificate per shipment while having access to the complete vessel information behind each shipment.

This information will be available to authorities in importing Member States upon request to the U.S. Government competent authority.'
