

COMMISSION DIRECTIVE 2003/82/EC
of 11 September 2003
amending Council Directive 91/414/EEC as regards standard phrases for special risks and safety
precautions for plant-protection products
(Text with EEA relevance)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Community,

Having regard to Council Directive 91/414/EEC of 15 July 1991 concerning the placing of plant-protection products on the market ⁽¹⁾, as last amended by Commission Directive 2003/81/EC ⁽²⁾, and in particular Article 16 and Article 18(2) thereof,

Whereas:

- (1) Council Directive 67/548/EEC of 27 June 1967 on the approximation of laws, regulations and administrative provisions relating to the classification, packaging and labelling of dangerous substances ⁽³⁾, as last amended by Commission Directive 2001/59/EC ⁽⁴⁾, requires that dangerous substances cannot be placed on the market unless their labelling shows standard phrases for special risks (R phrases) and standard phrases relating to the safe use of the substance (S phrases).
- (2) Directive 91/414/EEC provides for an authorisation for each plant-protection product on the basis of an assessment carried out in each Member State. That Directive also provides that Member States are to prescribe that active substances are not to be placed on the market unless they are classified, packaged and labelled in accordance with Directive 67/548/EEC.
- (3) Directive 1999/45/EC of the European Parliament and of the Council of 31 May 1999 concerning the approximation of laws, regulations and administrative provisions of the Member States relating to the classification, packaging and labelling of dangerous preparations ⁽⁵⁾, as amended by Commission Directive 2001/60/EC ⁽⁶⁾, applies to plant-protection products. Directive 1999/45/EC provides that the provisions of that Directive are to apply to preparations falling within the scope of Directive 91/414/EC from 30 July 2004.
- (4) Directive 91/414/EEC provides that all packaging of plant-protection products is to satisfy certain requirements as to labelling; *inter alia*, the packaging is to show the nature of any special risks for humans, animals or the environment, by means of standard phrases selected as appropriate from those set out in Annex IV of that

Directive. As that Annex has not yet been established, it is appropriate to include a list of such standard phrases in Annex IV to that Directive.

- (5) Directive 91/414/EEC provides that all packaging of plant-protection products is to show safety precautions for the protection of humans, animals or the environment, in the form of standard phrases selected as appropriate from those set out in Annex V of that Directive. As that Annex has not yet been established, it is appropriate to include a list of such standard phrases in Annex V to that Directive.
- (6) Directive 1999/45/EEC provides that the general principles of the classification and labelling of preparations of that Directive are to be applied in accordance with the criteria laid down in Annex VI to Directive 67/548/EEC. The criteria in Annex VI to Directive 67/548/EEC, which are based on the intrinsic properties of a substance, may not allow a sufficient description of the special risks which may arise during the use of plant-protection products in practice. Accordingly, the standard phrases for special risks and safety precautions to be set out in Annex IV and V to Directive 91/414/EEC should allow a sufficient description of the special risks which may arise during the use of plant-protection production and the safety precautions which should be taken.
- (7) The standard phrases for special risks and safety precautions to be set out in Annexes IV and V to Directive 91/414/EEC should be assigned in the light of the assessment by the Member States of the active substance(s) of those products in accordance with that Directive. It is, therefore, appropriate that Member States, after inclusion of an individual active substance in Annex I to Directive 91/414/EEC should be allowed a reasonable period to review existing authorisations and implement the provisions of Annexes IV and V to that Directive when granting authorisations.
- (8) The harmonised phrases in Annex IV and Annex V provide the basis for complementary and specific instructions for use according to Article 16(1)(k), (l), (m) and (n).
- (9) A harmonised scheme should be provided also for the classification and labelling of plant-protection products which contain microbial active substances.

None.

2. **Attribution criteria for standard phrases for special risks**

2.1. *Attribution criteria for standard phrases related to humans*

RSh 1

Toxic by eye contact.

The phrase shall be assigned where an eye irritation test according to Annex IIIA point 7.1.5 has resulted in overt signs of systemic toxicity (e.g. related to cholinesterase inhibition) or mortality among the animals tested, which is likely to be attributable to absorption of the active substance through the mucous membranes of the eye. The risk phrase shall also be applied if there is evidence in humans for systemic toxicity after eye contact.

Eye protection should be specified in these cases, as outlined in the general provisions of Annex V.

RSh 2

May cause photosensitisation.

The phrase shall be assigned where there is clear evidence from experimental systems or documented human exposure that products show photosensitising effects. The phrase shall also be applied to products containing a given active substance or formulation ingredient, which shows photosensitising effects in humans if the product contains this photosensitising component at a concentration of 1 % (w/w) or higher.

3. Attribution criteria for standard phrases for specific safety precautions

3.1. INTRODUCTION

In general, plant-protection products are only authorised for those specified uses, which are acceptable on the basis of an assessment according to the uniform principles laid down in Annex VI of this Directive.

As far as applicable, the specific safety precautions should reflect the results of such assessments according to the uniform principles and should be applied in particular in those cases where risk-mitigation measures are necessary to prevent unacceptable effects.

3.2. Attribution criteria for standard phrases for safety precautions for operators

SPo 1

After contact with skin, first remove product with a dry cloth and then wash the skin with plenty of water.

The phrase shall be assigned for plant-protection products containing ingredients which may react violently with water, such as cyanide salts or aluminium phosphide.

SPo 2

Wash all protective clothing after use.

The phrase is recommended when protective clothing is required to protect operators. It is obligatory for all plant-protection products classified as T or T+.

SPo 3

After igniting the product, do not inhale smoke and leave the treated area immediately.

The phrase may be assigned to plant-protection products used for fumigation in cases where the use of a respiratory mask is not warranted.

SPo 4

The container must be opened outdoors and in dry conditions.

The phrase should be assigned to plant-protection products containing active substances which may react violently with water or damp air, such as aluminium phosphide, or which may cause spontaneous combustion, such as (alkylenebis-) dithiocarbamates. This phrase may also be assigned to volatile products classified with R20, 23 or 26. Expert judgement must be applied in individual cases, to assess whether the properties of the preparation and the packaging are such as to cause harm to the operator.

SPo 5

Ventilate treated areas/greenhouses thoroughly/time to be specified/until spray has dried before re-entry.

The phrase may be assigned to plant-protection products used in greenhouses or other confined spaces, such as stores.

3.3. Attribution criteria for standard phrases for safety precautions for the environment

SPe 1

To protect groundwater/soil organisms do not apply this or any other product containing (*identify active substance or class of substances, as appropriate*) more than (*time period or frequency to be specified*).

The phrase shall be assigned to plant-protection products for which an evaluation according to the uniform principles shows for one or more of the labelled uses that risk-mitigation measures are necessary to avoid accumulation in soil, effects on earthworms or other soil-dwelling organisms or soil microflora and/or contamination of groundwater.

SPe 2

To protect groundwater/effects on aquatic organisms do not apply to (*soil type or situation to be specified*) soils.

The phrase may be assigned as a risk-mitigation measure to avoid any potential contamination of groundwater or surface water under vulnerable conditions (e.g. associated to soil type, topography or for drained soils), if an evaluation according to the uniform principles shows for one or more of the labelled uses that risk-mitigation measures are necessary to avoid unacceptable effects.

SPe 3

To protect aquatic organisms/non-target plants/non-target arthropods/insects respect an unsprayed buffer zone of (*distance to be specified*) to non-agricultural land/surface water bodies.

The phrase shall be assigned to protect non-target plants, non-target arthropods and/or aquatic organisms, if an evaluation according to the uniform principles shows for one or more of the labelled uses that risk-mitigation measures are necessary to avoid unacceptable effects.

SPe 4

To protect aquatic organisms/non-target plants do not apply on impermeable surfaces such as asphalt, concrete, cobblestones, railway tracks and other situations with a high risk of run-off.

Depending on the use pattern of the plant-protection product, Member States may assign the phrase to mitigate the risk of run-off in order to protect aquatic organisms or non-target plants.

SPe 5

To protect birds/wild mammals the product must be entirely incorporated in the soil; ensure that the product is also fully incorporated at the end of rows.

The phrase shall be assigned to plant-protection products, such as granules or pellets, which must be incorporated to protect birds or wild mammals.

SPe 6

To protect birds/wild mammals remove spillages.

The phrase shall be assigned to plant-protection products, such as granules or pellets, to avoid uptake by birds or wild mammals. It is recommended for all solid formulations, which are used undiluted.

SPe 7

Do not apply during bird breeding period.

The phrase shall be assigned when an evaluation according to the uniform principles shows that for one or more of the labelled uses such a mitigation measure is necessary.

SPe 8

Dangerous to bees/To protect bees and pollinating insects do not apply to crop plants when in flower/Do not use where bees are actively foraging/Remove or cover beehives during application and for (state time) after treatment/Do not apply when flowering weeds are present/Remove weeds before flowering/Do not apply before (state time)

The phrase shall be assigned to plant-protection products for which an evaluation according to the uniform principles shows for one or more of the labelled uses that risk-mitigation measures must be applied to protect bees or other pollinating insects. Depending on the use pattern of the plant-protection product, and other relevant national regulatory provisions, Member States may select the appropriate phrasing to mitigate the risk to bees and other pollinating insects and their brood.

3.4. Attribution criteria for standard phrases for safety precautions for good agricultural practice

SPa 1

To avoid the build-up of resistance do not apply this or any other product containing (identify active substance or class of substances, as appropriate) more than (number of applications or time period to be specified).

The phrase shall be assigned when such a restriction appears necessary to limit the risk of development of resistance.

3.5. Attribution criteria for standard phrases for specific safety precautions for rodenticides

SPr 1

The baits must be securely deposited in a way so as to minimise the risk of consumption by other animals. Secure bait blocks so that they cannot be dragged away by rodents.

To ensure compliance of operators the phrase should appear prominently on the label, so that misuse is excluded as far as possible.

SPr 2

Treatment area must be marked during the treatment period. The danger from being poisoned (primary or secondary) by the anticoagulant and the antidote against it should be mentioned.

The phrase should appear prominently on the label, so that accidental poisoning is excluded as far as possible.

SPr 3

Dead rodents must be removed from the treatment area each day during treatment. Do not place in refuse bins or on rubbish tips.

To avoid secondary poisoning of animals the phrase shall be assigned to all rodenticides containing anticoagulants as active substances.'
