

Pursuant to Article 2, paragraph 3 and Article 103, subparagraph 2 of the Waste Act (Official Gazette 178/2004, 111/2006 and 60/2008), the Government of the Republic of Croatia, at its session on 25 March 2009 adopted the

REGULATION

ON AMENDMENTS TO THE REGULATION ON CATEGORIES, TYPES AND CLASSIFICATION OF WASTE WITH A WASTE CATALOGUE AND LIST OF HAZARDOUS WASTE

Article 1

In the Regulation on categories, types and classification of waste with a waste catalogue and List of hazardous waste (Official Gazette 50/2005), Article 3, paragraph 3, the words: »Annex II to this Regulation« are replaced by the words: »Part III of the List of hazardous waste«.

In paragraph 4, the words: »the List of hazardous waste« are replaced by the words: » Part III of the List of hazardous waste«.

Paragraphs 5 and 6 are amended to read:

»(5) The List of hazardous waste is comprised of:

– Part I – categories and/or basic generic types of hazardous waste defined according to their properties and/or the activities which generated them,

– Part II – constituents of the wastes which render them hazardous when they have the properties described in Part III,

and

– Part III – properties of wastes which render them hazardous.

(6) Hazardous waste is also any other waste that contains one of the properties determined in Part III of the List of hazardous waste or which is mixed with the waste determined in Part I of the List of hazardous waste.«.

Article 2

In Article 4, paragraph 1, after the word: »Regulation« a comma and the words: »as a constituent part of this Regulation« are deleted.

Article 3

In Article 6, paragraph 1, indent 4 is amended to read:

»– Conditioning or pre-treatment of waste is any procedure of preparing waste for a certain method of treatment, recovery and/or disposal of waste, and can be: fragmentation, humidifying, packaging, draining, de-dusting, hardening, stabilisation, and other procedures that reduce effects of hazardous substances contained in waste and/or facilitate waste handling.«.

Paragraph 3 is amended to read:

»(3) Waste and waste substances that are generated after the procedures referred to in paragraph 1, indent 4 of this Article, do not change physical-chemical, or biological properties in regards to waste or waste substance from which it was generated, and retain the same key number in the Waste Catalogue. When during the listed procedures waste and waste substances of different physical-chemical or biological properties are generated, then the newly generated waste is marked with a new key number and the procedures are considered as waste treatment procedures and not as conditioning procedures.«.

Article 4

Article 8 is amended to read:

»The waste key number from the Waste Catalogue, for the purpose of control and supervision of transboundary transport, in the documents on transboundary transport needs to be identified with the waste identification mark contained in Annex I – List of hazardous waste and Annex II – List of non-hazardous waste.«.

Article 5

After Article 8, Article 8.a is added and reads:

»Article 8.a

The List of hazardous waste, the Waste Catalogue, Annex I – List of hazardous waste and Annex II – List of non-hazardous waste are published along with this Regulation and form an integral part thereof.«.

Article 6

This Ordinance shall enter into force on the eighth day after the day of its publication in the Official Gazette.

1 For the purpose of this waste catalogue, PCB shall be defined as in Directive 96/59/EC of 16 September 1996 on the disposal of polychlorinated biphenyls and polychlorinated terphenyls (PCB/PCT) (SL L 243, 24 Sep 1996, page 31).

2 Hazardous components from electrical and electronic equipment may include accumulators and batteries mentioned in 16 06 and marked as hazardous; mercury switches, glass from cathode ray tubes and other activated glass, etc.

3 For the purpose of this entry, transition metals are: scandium, vanadium, manganese, cobalt, copper, yttrium, niobium, hafnium, tungsten, titanium, chromium, iron, nickel, zinc, zirconium, molybdenum and tantalum. The classification of dangerous substances shall determine which among those transition metals and which transition metal compounds are hazardous.

4 Stabilisation processes change the dangerousness of constituents in the waste and thus transform hazardous waste into non-hazardous waste. Solidification processes only change the physical state of the waste (e.g., liquid into solid) by using additives without changing the chemical properties of waste.

5 Waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle, or long term.

6 Hazardous components from electrical and electronic equipment may include accumulators and batteries mentioned in 16 06 and marked as hazardous; mercury switches, glass from cathode ray tubes and other activated glass, etc.

ANNEX I

Regardless of whether or not wastes are included on this List, it shall be prohibited to import such wastes if they are contaminated by other materials to an extent which:

[1] Note that mirror entry on List B (B1160) does not specify exceptions.

[2] This entry does not include scrap assemblies from electric power generation.

[3] PCBs are at a concentration level of 50 mg/kg or more.

[4] The 50 mg/kg level is considered to be an internationally practical level for all wastes. However, many individual countries have established lower regulatory levels (e.g. 20 mg/kg) for specific wastes.

[5] »Out-dated« means unused within the period recommended by the manufacturer.

[6] This entry does not include wood treated with wood-preserving chemicals.

[7] This listing includes wastes in the form of ash, residue, slag, dross, skimming, scaling, dust, powder, sludge and cake, unless a material is expressly listed elsewhere.

[8] »Green« list of waste

[9] »Non-dispersible« does not include any wastes in the form of powder, sludge, dust or solid items containing encased hazardous waste liquids

[10] The term 'bulk finished form' includes all metallic non-dispersible forms of the scrap listed in this entry

[11] Note that even where low level contamination with materials specified in Part II of the List of hazardous waste initially exists, subsequent processes, including recycling processes, may result in separated fractions containing significantly enhanced concentrations of those materials specified in Part II of the List of hazardous waste

[12] This entry does not include scrap from electrical power generation

[13] Re-use can include repair, refurbishment or upgrading, but not major reassembly.

[14] In some countries these materials destined for direct re-use are not considered wastes.

[16] It is understood that such scraps are completely polymerised.

[17] Post-consumer wastes are excluded from this entry. Wastes shall not be mixed. Problems arising from open-burning practices to be considered
