

COMMISSION IMPLEMENTING DECISION (EU) 2024/367

of 23 January 2024

laying down rules for the application of Directive (EU) 2020/2184 of the European Parliament and of the Council by establishing the European positive lists of starting substances, compositions and constituents authorised for use in the manufacture of materials or products that come into contact with water intended for human consumption

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Directive (EU) 2020/2184 of the European Parliament and of the Council of 16 December 2020 on the quality of water intended for human consumption (¹), and in particular Article 11(2), point (b), thereof,

Whereas:

- (1) Directive (EU) 2020/2184 provides for the establishment of European positive lists of substances, compositions and constituents for each type of materials, namely organic, cementitious, metallic, enamels, ceramic or other inorganic materials, which are authorised for use in the manufacture of materials or products that come into contact with water intended for human consumption and fall within the scope of Article 11 of that Directive. These European positive lists should include, where appropriate, conditions for the use of substances, compositions and constituents and migration limits, which are to be determined on the basis of the methodologies adopted pursuant to Article 11(2), point (a), of Directive (EU) 2020/2184. Such conditions of use may include a purity criterion, a condition on the physico-chemical characteristics of the starting substance, composition or constituent, a condition on its manufacturing process or on the manufacturing process of final materials, their use for certain products, the use of these products, or further testing requirement. Sacrificial anodes, membranes and ions exchange resins are water treatment chemicals and/or filter media and are covered by Article 12 of Directive (EU) 2020/2184, therefore they are excluded from the scope of Article 11 of that Directive.
- (2) Article 11(3) of the Directive sets out that lists established by the Commission pursuant to Article 5 of Regulation (EC) No 1935/2004 of the European Parliament and of the Council (²) should be used as a source to establish the first European positive lists under the Directive. The list established in Annex I to Commission Regulation (EU) No 10/2011 (³) is one of these lists. However, substances included on this list have only been assessed for their use in plastic food contact materials in accordance with Regulation (EU) No 10/2011, subject to specific conditions of use. Moreover, the European Food Safety Authority has indicated that a significant number of the substances should be prioritised for re-evaluation as no specific migration limit was established when they were authorised for use in plastic food contact materials (⁴). The inclusion of such substances in Annex I to Regulation (EU) No 10/2011 nevertheless provides a much higher level of certainty over their safety in contact with drinking water when used in the manufacture of drinking water products, than would be the case for unlisted substances. Therefore it is appropriate to add substances originating from lists established by the Commission pursuant to Article 5 of Regulation (EC) No 1935/2004 to the first European list under Article 11(3) of the Directive, provided these

(¹) OJ L 435, 23.12.2020, p. 1.

(²) Regulation (EC) No 1935/2004 of the European Parliament and of the Council of 27 October 2004 on materials and articles intended to come into contact with food and repealing Directives 80/590/EEC and 89/109/EEC (OJ L 338, 13.11.2004, p. 4).

(³) Commission Regulation (EU) No 10/2011 of 14 January 2011 on plastic materials and articles intended to come into contact with food (OJ L 12, 15.1.2011, p. 1).

(⁴) EFSA CEP Panel (EFSA Panel on Food Contact Materials, Enzymes and Processing Aids), Silano V, et. al., 2020. Scientific Opinion on the review and priority setting for substances that are listed without a specific migration limit in Table 1 of Annex 1 of Regulation 10/2011 on plastic materials and articles intended to come into contact with food. EFSA Journal 2020;18(6):6124,104 pp. <https://doi.org/10.2903/j.efsa.2020.6124>.

additions are only used as a starting point for further conformity assessment in accordance with Article 11(8), and provided their re-evaluation by the expiry date set out in the first European positive list takes account of all the conditions and drinking water materials in which they may be used.

- (3) Where applicable, the migration limit, i.e. the maximum tolerable concentration at the tap, should be based on the parametric value set out in Part B or C of Annex I to Directive (EU) 2020/2184 or the specific migration limit set out in Annexes I and II to Regulation (EU) No 10/2011. This should, however, be done after application of an allocation factor to account for the proportion of potential exposure from materials in contact with water intended for human consumption derived from the information provided by Member States.
- (4) Annex I to Regulation (EU) No 10/2011 provides further detail on conditions of use of authorised substances, as well FCM substance reference numbers used in risk assessments. To facilitate further conformity assessment of substances that are added to the first European positive list on the basis of Annex I to Regulation (EU) No 10/2011, it is appropriate to add their FCM reference numbers in the first European positive lists.
- (5) The expiry dates included in the first European positive lists follow the recommendation from European Chemicals Agency (ECHA) in particular on the basis of the hazardous properties of the starting substance, composition or constituent, the quality of the underlying risk assessments, the extent to which those risk assessments are up-to-date and the need for a staggered review of these entries.
- (6) Some entries in the European positive lists should be allowed to be combined, extended to related starting substances, compositions and constituents or extended for use in different material types than the one for which they have been authorised when such combination or extension has no impact on the protection of human health to ensure the proportionality and efficiency of the process.
- (7) Based on notifications from Member States, the first European positive lists include group entries covering multiple starting substances, compositions or constituents. Assessing the safety of each individual starting substance, composition or constituent separately is more appropriate to assess the safety of the groups; however, at the time of adopting the first European positive list it was not possible to identify the starting substances or organic cementitious constituents in those groups. Therefore, group entries should progressively be replaced in the European positive lists by the individual starting substances, compositions or constituents in the group and the economic operator should only be able to rely on such group entries for the first European positive list if it is able to demonstrate the safety of its starting substance, composition or constituent.
- (8) In order to ensure an orderly and efficient application process, an entry may be renewed provided that notification of intention and, subsequently, an application is submitted to ECHA within a set deadline.
- (9) Member States' national provisions with regard to starting substances, compositions and constituents and their national positive lists were notified to ECHA by 12 July 2021. In order to allow national authorities sufficient time to prepare for the application of the European positive lists, the application of this act will start from 31 December 2026. The national systems are to apply until 31 December 2026. In addition, transitional measures should be provided for substances, compositions and constituents approved in the national systems from 13 July 2021 to 31 December 2026, provided that in accordance with Part B of Annex I to Directive (EU) 2020/2184, these substances do not exceed the parametric value of 5 µg/l for lead (Pb) at the tap.
- (10) The measures provided for in this Decision are in accordance with the opinion of the Committee referred to in Article 22(1) of Directive (EU) 2020/2184,

HAS ADOPTED THIS DECISION:

Article 1

European positive lists

This Decision establishes the following:

- (a) the European positive list of starting substances for organic materials and groups of starting substances for organic materials as set out in Tables 1 and 2 of Annex I respectively;
- (b) the European positive list of compositions of metallic materials and groups of compositions for metallic materials as set out in Tables 1 and 2 of Annex II respectively;
- (c) the European positive list of organic constituents of cementitious materials and groups of organic constituents for cementitious materials as set out in Tables 2 and 3 of Annex III respectively;
- (d) the European positive list of compositions of enamels, ceramic and other inorganic materials as set out in Table 1 of Annex IV.

Article 2

Definitions

For the purpose of this Decision, the following definitions shall apply:

- (1) ‘material’ means a solid, semi-solid or liquid that is used for the manufacturing of a product that is:
 - (a) an organic composition prepared from one or more starting substances; or
 - (b) a cementitious composition prepared from one or more constituents; or
 - (c) a metallic, enamel, ceramic or other inorganic composition;
- (2) ‘monomer’ means a substance which is capable of forming covalent bonds with a sequence of additional like or unlike molecules under the conditions of the relevant polymer-forming reaction used for the particular process;
- (3) ‘organic material’ means a material that mainly consist of carbon-based substances;
- (4) ‘monomer unit’ means the reacted form of a monomer substance in a polymer;
- (5) ‘polymer’ means a substance consisting of molecules that are characterised by the sequence of one or more types of monomer units and that are distributed over a range of molecular weights wherein differences in the molecular weight are primarily attributable to differences in the number of monomer units comprising the following:
 - (a) a simple weight majority of molecules containing at least three monomer units which are covalently bound to at least one other monomer unit or other reactant;
 - (b) less than a simple weight majority of molecules of the same molecular weight;
- (6) ‘polymerised part’ means the part of a substance composition consisting of molecules characterised by the sequence of one or more types of monomer units. Molecules such as dimers, trimers contribute also to the polymerised part. However, the term ‘polymerised part’ does not cover unreacted monomer or unreacted other reactants;
- (7) ‘pre-polymer’ is a substance resulting from a polymerisation-type of reaction and that is further reacted into a final polymer in a material or product;
- (8) ‘organic cementitious constituent’ means an organic substance that is used in the manufacture of cementitious materials;
- (9) ‘cement’ means a finely ground inorganic material which, when mixed with water, forms a paste that sets and hardens by means of hydration reactions and processes and which, after hardening, retains its strength and stability even under water;
- (10) ‘cementitious material’ means a material that contains a hydraulic cement in sufficient proportion to act as the main binder by forming a hydrate structure which governs the performance of the material;

- (11) ‘non-intentionally added species’ means either one of the following:
 - (a) an impurity of a starting substance or organic cementitious constituent or composition;
 - (b) a reaction product or a degradation product of a starting substance or organic cementitious constituent that forms during the processing or use of the material;
 - (c) a reaction product or a degradation product of a starting substance or organic cementitious constituent that forms in contact with water during the use of the material;
- (12) ‘metallic material’ means a metal or metal alloy used either in bulk form or as metallic plating;
- (13) ‘ceramic materials’ means inorganic poly- or single crystalline, non-metallic solid materials subjected to high temperature in manufacture;
- (14) ‘enamel’ means a material that is a vitreous material obtained by melting at temperatures higher than 1 200 °C and fritting of a mixture of inorganic substances;
- (15) ‘maximum tolerable concentration at the tap’ (MTC_{tap}) means the maximum permitted concentration of a substance transferred from a specific material into water intended for human consumption.

Article 3

Transitional provision

Starting substances, compositions and constituents which have been approved by a Member State competent authority during the period from 13 July 2021 to 31 December 2026 in accordance with national provisions may be used in the manufacture of materials or products that come into contact with water intended for human consumption until 31 December 2032, provided they comply with the parametric value of 5 µg/l Pb (lead) at the tap as set out in Part B of Annex I to Directive (EU) 2020/2184.

Article 4

Entry into force

This Decision shall enter into force on the twentieth day following that of its publication in the Official Journal of the European Union.

It shall apply from 31 December 2026.

Done at Brussels, 23 January 2024.

1312		89-03-8		petrolatum	Additive	Rubber					31 December 2028
1313		117-84-0		phthalic acid, di-n-octyl ester	Additive	Rubber	300		(25) (27)		31 December 2028
1314		26762-92-5		p-menthane hydroperoxide	Aid to polymerisation	Rubber				In rubbers, not for use in products in contact with warm and hot water.	31 December 2031
1315				p-nonylphenyl phosphite, 2,2-bis(3-tert-butyl-4-hydroxyphenyl) propane ester	Additive	Rubber				In rubbers, not for use in products in contact with warm and hot water.	31 December 2028
1316		25101-03-5		polypropyleneglycol adipate	Additive	Rubber			(30)		31 December 2037
1317	232--299-0	8002-13-9		rapeseed oil	Additive	Rubber					31 December 2028
1318		27214-90-0		sebacic acid, diisooctyl ester	Additive	Rubber				In rubbers, not for use in products in contact with warm and hot water.	31 December 2028
1319		2432-87-3		sebacic acid, di-n-octyl ester	Additive	Rubber					31 December 2031
1320		1344-08-7		sodium polysulfide	Additive or polymer production aid	Rubber				In rubbers, not for use in products in contact with warm and hot water.	31 December 2031

							Value for the starting substance	Values for other relevant chemical species (E)			
1334			12	acids, fatty, from animal or vegetable food fats and oils	Additive or polymer production aid Other (processing aid)	All					31 December 2031
1335			13	alcohols, aliphatic, monohydric, saturated, linear, primary (C ₄ -C ₂₄)	Additive or polymer production aid	All					31 December 2031
1336			14	n-alkyl(C ₁₀ -C ₁₃)benzenesulfonic acid	Additive Polymer production aid	All	1500				31 December 2031
1337			15	alkyl, linear with even number of carbon atoms (C ₁₂ -C ₂₀) dimethylamines	Additive or polymer production aid	All	1500				31 December 2031
1338			16	alkyl(C ₈ -C ₂₂)sulfonic acids	Additive Polymer production aid	All	300				31 December 2031
1339			17	alkyl(C ₈ -C ₂₂)sulfuric acids, linear, primary with an even number of carbon atoms	Additive or polymer production aid	All					31 December 2031
1340			19	N,N-bis(2-hydroxyethyl)alkyl (C ₈ -C ₁₈) amine	Additive Polymer production aid	All			(7)		31 December 2031
1341			20	N,N-bis(2-hydroxyethyl)alkyl (C ₈ -C ₁₈) amine hydrochlorides	Additive or polymer production aid	All			(7)		31 December 2031

							Value for the starting substance	Values for other relevant chemical species (E)			
1354			44	glycerol, esters with 12-hydroxystearic acid	Additive or polymer production aid	All					31 December 2031
1355			45	glycerol, esters with lauric acid	Additive or polymer production aid	All					31 December 2031
1356			46	glycerol, esters with linoleic acid	Additive or polymer production aid	All					31 December 2031
1357			47	glycerol, esters with myristic acid	Additive or polymer production aid	All					31 December 2031
1358			48	glycerol, esters with nonanoic acid	Additive or polymer production aid	All					31 December 2031
1359			49	glycerol, esters with oleic acid	Polymer production aid Other (processing aid)	All					31 December 2031
1360			50	glycerol, esters with palmitic acid	Additive or polymer production aid	All					31 December 2031
1361			51	glycerol, esters with propionic acid	Additive or polymer production aid	All					31 December 2031
1362			52	glycerol, esters with ricinoleic acid	Additive or polymer production aid	All					31 December 2031

							Value for the starting substance	Values for other relevant chemical species (E)			
1368			69	phosphorous acid, tris(nonyl-and/ or dinonylphenyl) ester	Additive	All	1500		In the absence of plasticiser, maximum residual content in the final material (QM) = 3 000 mg/kg. For butadiene-styrene copolymer, maximum residual content in the final material (QM) = 15 000 mg/kg.	31 December 2028	
1369			73	polyesters of 1,2-propanediol and/ or 1,3- and/or 1,4-butanediol and/ or polypropyleneglycol with adipic acid, which may be end-capped with acetic acid or fatty acids C ₁₂ -C ₁₈ or n-octanol and/or n-decanol	Additive or polymer production aid	All			(30) (31)		31 December 2034
1370			78	polyethyleneglycol (EO = 1-50) mono-alkylether (linear and branched, C ₈ -C ₂₀) sulfate, salts	Additive or polymer production aid	All	250				31 December 2034

EUPL Number	EC Number	CAS Number	FCM substance Number (A)	Starting substance group name	Technical function (B)	Drinking water contact materials (C)	Maximum Tolerable Concentration at the tap in organic materials (MTC _{tap, organics}) in µg/l		Total Maximum Tolerable Concentration at the tap (MTC _{(T) tap, organics}) in µg/l (D)	Conditions of use	Expiry date
							Value for the starting substance	Values for other relevant chemical species (E)			
1371			80	powders, flakes and fibres of brass, bronze, copper, stainless steel, tin, iron and alloys of copper, tin and iron	Additive	All			For relevant elements, refer to Annex V.		31 December 2031
1372			89	stearic acid, esters with ethyleneglycol	Additive or polymer production aid	All			(2)		31 December 2031
1373		50-21-5	99	lactic acid	Monomer or other reactant Polymer production aid Other (processing aid)	All					31 December 2034
1374		50-99-7	102	glucose	Monomer or other reactant	All					31 December 2037
1375		57-55-6	109	1,2-propanediol	Monomer or other reactant Additive Polymer production aid	All					31 December 2034
1376		59-02-9 10191-41-0	110	α-tocopherol	Polymer production aid Other (processing aid)	All					31 December 2034
1377		75-56-9	135	propylene oxide	Monomer or other reactant	All	0,1		Maximum residual content in the final material (QM) = 1 mg/kg in the product.		31 December 2028

EUPL Number	EC Number	CAS Number	FCM substance Number (A)	Starting substance group name	Technical function (B)	Drinking water contact materials (C)	Maximum Tolerable Concentration at the tap in organic materials (MTC _{tap, organics}) in µg/l		Total Maximum Tolerable Concentration at the tap (MTC _{(T) tap, organics}) in µg/l (D)	Conditions of use	Expiry date
							Value for the starting substance	Values for other relevant chemical species (E)			
1378		107-01-7	224	2-butene	Monomer or other reactant	All					31 December 2034
1379		107-88-0	228	1,3-butanediol	Monomer or other reactant	All					31 December 2034
1380		110-98-5 25265-71-8	257	dipropylene glycol	Monomer or other reactant	All					31 December 2034
1381		138-22-7	322	lactic acid, butyl ester	Additive or polymer production aid	All					31 December 2031
1382		598-32-3	357	3-buten-2-ol	Monomer or other reactant	All	0,1			Only to be used as a co-monomer for the preparation of polymeric additive. Verification of compliance by residual content per water contact surface area (QMA) pending the availability of an analytical method.	31 December 2028
1383		1330-43-4	407	sodium tetraborate	Additive or polymer production aid	All			For boron, refer to Annex V.		31 December 2034

EUPL Number	EC Number	CAS Number	FCM substance Number (A)	Starting substance group name	Technical function (B)	Drinking water contact materials (C)	Maximum Tolerable Concentration at the tap in organic materials (MTC _{tap, organics}) in µg/l		Total Maximum Tolerable Concentration at the tap (MTC _{(T) tap, organics}) in µg/l (D)	Conditions of use	Expiry date
							Value for the starting substance	Values for other relevant chemical species (E)			
1384		1332-37-2	409	iron oxide	Additive	All			For iron, refer to Annex V.	If used as filler or pigment (additive) the requirements on purity of pigments, colorants and fillers apply; refer to Section 4.6, Annex I of Commission Implementing Decision (EU) 2024/368.	31 December 2031
1385		3724-65-0	467	crotonic acid	Monomer or other reactant Additive	All			(34)		31 December 2028
1386		4080-31-3	474	1-(3-chloroallyl)-3,5,7-triaza-1-azoniaadamantane chloride	Additive or polymer production aid	All	15				31 December 2031
1387			501	aluminium fibres, flakes and powders	Additive	All			For aluminium, refer to Annex V.	If used as filler or pigment (additive) the requirements on purity of pigments, colorants and fillers apply; refer to Section 4.6, Annex I of Commission Implementing Decision (EU) 2024/368.	31 December 2031

EUPL Number	EC Number	CAS Number	FCM substance Number (A)	Starting substance group name	Technical function (B)	Drinking water contact materials (C)	Maximum Tolerable Concentration at the tap in organic materials (MTC _{tap, organics}) in µg/l		Total Maximum Tolerable Concentration at the tap (MTC _{(T) tap, organics}) in µg/l (D)	Conditions of use	Expiry date
							Value for the starting substance	Values for other relevant chemical species (E)

Notes:

1. Note 1: Explanation of the notes in Tables 1 and 2

The meaning of the notes provided in Tables 1 and 2 is as follows:

A.	Substance numbers under European food contact material (FCM) legislation are provided for information purposes only.
B.	This column indicates the technical function that the starting substance performs when used in the drinking water contact materials the starting substance is authorised for.
C.	This column indicates the categories of drinking water contact materials the starting substance is authorised for.
D.	Total Maximum Tolerable Concentration at the tap ($MTC(T)_{\text{tap, organics}}$) means the maximum permitted concentration of specified substances migrating from organic materials into water intended for human consumption either as (a) total of moiety of the substances as provided under Table 3; or (b) total of the bound or unbound element or ion provided under Annex V.
E.	Relevant chemical species are those identified in accordance with Section 3, Annex IV to Commission Implementing Decision (EU) 2024/365.

2. Note 2: Scope of an authorisation

- i. Where a starting substance appearing on the list as an individual entry is also covered by a group entry, the conditions of use and specifications and expiry dates applying to this starting substance shall be those indicated in the individual entry exclusively.
- ii. Unless stated otherwise in Table 1, the following salts of authorised acids, phenols and alcohols shall be considered covered by that authorisation: aluminium, ammonium, barium, calcium, cobalt, copper, europium, gadolinium, iron, lanthanum, lithium, magnesium, manganese, potassium, sodium, terbium, and zinc. This is subject to compliance with the corresponding $MTC_{\text{tap, organics}}$ value for the element or ion shown in Annex V for organic materials. In certain cases, where the safety assessment indicates concerns on the use of the free acids, only the salts should be authorised by indicating in the list the name as '... acid(s), salts'.
- iii. Mixtures obtained by mixing authorised starting substances without a chemical reaction of the components shall be considered covered by that authorisation.
- iv. Where a starting substance appears on the list as its anhydrous form, its approval shall be considered to covers its hydrated form.
- v. In the case of any natural or synthetic polymeric substance of an authorised monomer or other reactant and that polymeric substance is not used as an additive, that polymeric substance shall be considered covered by the authorisation of that monomer or other reactant. After the first European positive list, only entries for the monomer and other reactant shall be included.
- vi. In the case of any natural or synthetic polymeric substance of an authorised monomer or other reactant and that polymeric substance has a molecular weight of at least 1 000 Da, that polymeric substance shall be considered covered by the authorisation of that monomer or other reactant when used as additives. After the first European positive list, only entries for the monomer and other reactant shall be included.

As an exception, this provision shall not apply to polymers obtained from microbial fermentation.

- vii. Pre-polymers and natural or synthetic polymers, as well as their mixtures, used as monomer or other reactant incorporated in the polymer shall be considered covered by the authorisation of the monomers or other reactant required to synthesise them. After the first European positive list, only entries for the monomer or other reactant shall be included.

As an exception, this provision shall not apply to polymers obtained from microbial fermentation, pre-polymers for organopolysiloxanes used in the manufacture of silicones, rubbers, lubricants and surface treatment for fillers, and pre-polymers for coatings.

- viii. After the first European positive list, only entries for a polymer shall be included in cases for which points v to vii are not applicable.
- ix. Organic cementitious constituents authorised on the European positive list of organic cementitious constituents of Annex III may be used in organic materials when used as constituents in cementitious fillers.
- x. Ceramic compositions authorised on the European positive list of composition for enamels, ceramic and other inorganic materials of Annex IV may be used as fillers in organic materials.
- xi. Fibres made of metallic compositions authorised on the European positive list of compositions for metallic materials of Annex II may be used in organic materials.
- xii. Fibres and microballs made of glass compositions authorised on the European positive list of composition for enamels, ceramics and other inorganic materials of Annex IV may be used in organic materials provided that each filament has a diameter above 1 µm and the average diameter of the filaments in the organic material is above 5 µm.
- xiii. Water may be used as a starting substance in the manufacture of organic materials that come into contact with water intended for human consumption.
- xiv. An entry in Table 1 covers a nanoform only when it is explicitly stated in the approval of that entry.

3. Note 3: Additional conditions of use

- i. Only biocidal active substances of Product-type 6 (Preservatives for products during storage) in accordance with Regulation (EU) No 528/2012 may be used as starting substances.
- ii. Entries in Table 1 and Table 2 which according to their conditions of use are used in organic materials as metallic fibres, shall adhere to the requirements of Annex II. Entries in Table 1 and Table 2 which according to their conditions of use are used in organic materials as ceramic fillers, shall adhere to the requirements of Annex IV. Entries in Table 1 and Table 2 which according to their conditions of use are used in organic materials as glass fibres and microballs, shall adhere to the requirements of Annex IV.

Where indicated in Table 1, entries identified with an MTC(T)_{tap, organics} shall comply with the following:

Total MTC(T)_{tap, organics} values for groups of listed starting substances

MTC(T) _{tap, organics} reference in Table 1	MTC(T) _{tap, organics} in µg/l	MTC(T) _{tap, organics} specification
(1)	300	expressed as acetaldehyde
(2)	1 500	expressed as ethyleneglycol
(3)	1 500	expressed as maleic acid
(4)	750	expressed as caprolactam
(5)	150	expressed as the sum of the substances
(6)	50	expressed as iodine
(7)	60	expressed as tertiary amine
(8)	300	expressed as the sum of the substances
(9)	9,0	expressed as tin (for methyltin methyltin mercaptoacetates)
(10)	0,3	expressed as tin (for di-n-octyltins)
(11)	60	expressed as tin (for mono-n-octyltins)
(12)	1 500	expressed as the sum of the substances
(13)	75	expressed as the sum of the substances
(14)	250	expressed as the sum of the substances and their oxidation products
(15)	750	expressed as formaldehyde
(16)	0,1	expressed as isocyanate moiety
(17)	2,5	expressed as the sum of the substances
(18)	500	expressed as SO ₂
(19)	1 500	expressed as the sum of the substances
(20)	250	expressed as trimellitic acid
(21)	300	expressed as acrylic acid
(22)	300	expressed as methacrylic acid
(23)	250	expressed as the sum of the substances

MTC(T) _{tap, organics reference in Table 1}	MTC(T) _{tap, organics in µg/l}	MTC(T) _{tap, organics specification}
(24)	2,5	expressed as the sum of mono- <i>n</i> -dodecyltin tris(isooctylmercaptoacetate), di- <i>n</i> -dodecyltin bis(isooctyl mercaptoacetate), mono-dodecyltin trichloride and di-dodecyltin dichloride expressed as the sum of mono- and di-dodecyltin chloride
(25)	90	expressed as the sum of the substances
(26)	250	expressed as isophthalic acid
(27)	375	expressed as terephthalic acid
(28)	2,5	expressed as the sum of 6-hydroxyhexanoic acid and caprolactone
(29)	250	expressed as 1,4-butanol
(30)	1 500	expressed as the sum of the substances
(31)	3 000	expressed as the sum of the substances plus Diisobutyl phthalate, with synonyms 1,2-bis(2-methylpropyl) benzene-1,2-dicarboxylate or 'DIBP' and CAS number 84-69-5 which is not listed as an authorised substance in Table 1. However, it may co-occur with other phthalates as a consequence of its use as an aid to polymerisation and is included in group restrictions
(32)	0,1	expressed as eugenol
(33)	2,5	expressed as 1,3-benzenedimethanamine (hydrolysis product)
(34)	2,5	expressed as crotonic acid
(35)	30	expressed as the sum of phthalic acid, dibutyl ester (DBP), diisobutyl phthalate (DIBP), phthalic acid, benzyl butyl ester (BBP) and phthalic acid, bis(2-ethylhexyl) ester (DEHP) expressed as DEHP equivalents using the following equation: $5 \times DBP + 4 \times DIBP + 0.1 \times BBP + 1 \times DEHP$
(36)	2,5	expressed as the sum of triethanolamine and the hydrochloride adduct expressed as triethanolamine
(37)	0,1	expressed as perchlorate
(38)	0,05	expressed as PFAS Total
(39)	0,01	expressed as Sum of PFAS
(40)	150	expressed as the sum of (di)ethyleneglycol, monoalkyl (C ₁ ,C ₂ ,C ₄ ,C ₆) ethers and acetic acid, 2-ethoxyethyl ester
(41)	1 500	expressed as the sum of sodium salts of alkyl(C ₈ -C ₁₈)benzene sulfonates, alkyl(C ₈ -C ₁₈)naphthalene sulfonates, alkyl(C ₈ -C ₁₈)sulfates and alkyl(C ₈ -C ₁₈)sulfonates
(42)	50	expressed as the sum of thiurams and dithiocarbamates

MTC(T) _{tap, organics} reference in Table 1	MTC(T) _{tap, organics} in µg/l	MTC(T) _{tap, organics} specification
(43)	100	expressed as the sum of benzothiazole-2-thiol (CAS Number 149-30-4, EUPL Number 0910), di(benzothiazole-2-yl) disulphide (CAS Number 120-78-5, EUPL Number 0890), 2-(morpholinothio)benzothiazole (CAS Number 102-77-2), N-tert-butylbenzothiazole-2-sulphenamide (CAS Number 95-31-8, EUPL Number 0854), N-cyclohexylbenzothiazole-2-sulfenamide (CAS Number 95-33-0, EUPL Number 0847), 2-(2,6-dimethylmorpholinothio) benzthiazole (CAS Number 102-78-3) and 2-benzothiazyl-N,N-diethylthiocarbamyl sulphide (CAS Number 95-30-7)
(44)	0,1	expressed as the sum of ethylvinylbenzene and divinylbenzene
(45)	0,6	expressed as the sum of 1,4- and 1,5-hexadiene
(46)	2,5	expressed as neodecanoic acid
(47)	50	expressed as the sum of xanthogenates
(48)	10 2,5	expressed as the sum of TMBPF, TMBPF-DGE, TMBPF-DGE·H ₂ O and TMBPF-DGE·2H ₂ O expressed as the sum of TMBPF-DGE·HCl, TMBPF-DGE·2HCl and TMBPF-DGE·HCl·H ₂ O
49	6	expressed as 3-monochlor-1,2-propane-diol

Where entries in Table 1 which contain alkylphenol structural moieties are used as stabilisers they may be accompanied by the non-intentionally added substances shown in Table 4 and the MTC_{tap, organics} values shown in the table shall apply to those substances.

Notes:

1. Note 1: Explanation of the notes in Tables 1 and 2

The meaning of the note provided in Tables 1 and 2 is as follows:

A. Metallic composition category means a group of metallic compositions with the same metallic composition constituents, the same behaviour in contact with water intended for human consumption and the same restrictions with regard to water composition and/or surface area. A category has a reference material(s) with a controlled composition for which the metal releases are known and reproducible and represents the reasonable worst-case metal releases for the category. They are identified in the ECHA guidance.

2. Note 2: MTC_{tap, metallics}

The MTC_{tap, metallics} used to assess the safety of the use of the compositions listed under Tables 1 and 2 are provided for information purposes under Annex V.

2026			melamine sulfonates	Admixtures						31 December 2031
2027			naphthalene sulfonates	Admixtures						31 December 2031
2028			substances releasing formaldehyde	Admixtures, organic additions, formwork release agents	Preservative				Only to be used as in-can preservative; no antimicrobial effects on the surface of the product, to be tested in accordance with Sections 7.3 and 8.5, Annex III of Commission Implementing Decision (EU) 2024/368.	31 December 2031

Notes:

1. Note 1: Explanation of the notes in Tables 2 and 3

- i. The meaning of the notes provided in Tables 2 and 3 is as follows:

- | |
|--|
| A. Total Maximum Tolerable Concentration at the tap ($MTC(T)_{\text{tap, cementitious}}$) means the maximum permitted concentration of specified substances migrating from cementitious materials into water intended for human consumption as total of the element or ion indicated in Annex 5. |
| B. Relevant chemical species are those identified in accordance with Section 3, Annex IV to Commission Implementing Decision (EU) 2024/365. |

2. Note 2: Scope of an authorisation

- i. Where an organic cementitious constituent appearing on the list as an individual entry is also covered by a group entry, the conditions of use and specifications and expiry dates applying to this organic cementitious constituent shall be those indicated in the individual entry exclusively.
- ii. Where a organic cementitious constituent appears on the list as its anhydrous form, its approval shall be considered to covers its hydrated form.

- iii. Unless stated otherwise in Tables 2 and 3, the following salts of authorised acids, phenols and alcohols shall be considered covered by that authorisation: aluminium, ammonium, barium, calcium, cobalt, copper, europium, gadolinium, iron, lanthanum lithium, magnesium, manganese, potassium, sodium, terbium, and zinc. This is subject to compliance with the corresponding MTC_{rap, cementitious} value for the element or ion which is the same as shown in Annex V for cementitious materials. In certain cases, where the safety assessment indicates concerns on the use of the free acids, only the salts should be authorised by indicating in the list the name as '... acid(s), salts'.
 - iv. For the purposes of the first European positive list of organic cementitious constituents, polymers used as constituents of admixtures which are exclusively manufactured with authorised monomers shall be considered covered by those authorisations.
 - v. After the first European positive list of organic cementitious constituents, in the case of polymer, the entry in the European positive list shall be for the monomer(s) and other reactant(s) used in the polymer, and polymers manufactured from authorised monomer(s) and other reactant(s) shall be considered to be covered by these entries.
 - vi. In the case of polymers used as constituents of fibres or additives, points v to viii of Section 2 of Annex I shall apply *mutatis mutandi*.
 - vii. Fibres made of metallic compositions approved on the European positive list for metallic materials, are also authorised for use in cementitious materials.
 - viii. An entry in Table 1 covers a nanoform only when it is explicitly stated in the approval of that entry.
3. Note 3: Additional conditions of use
- i. Only biocidal active substances of Product-type 6 (Preservatives for products during storage) in accordance with Regulation (EU) No 528/2012 may be used as organic cementitious constituents.

2039	Ceramics	Ceramic materials made of carbon	Graphites	No specific composition requirements. The starting materials include lignite, coal or petrol coke, which are mixed with a binding agent such as tar or a plastic resin, and then annealed at 600 °C to 1 000 °C. This produces carbon graphites, which are used for applications such as slide bearings, sealing rings or pump components. In another optional manufacturing step, the graphitisation, these carbon graphites are annealed once again at up to 3 000 °C. This causes the individual graphite crystals to enlarge, causing an increase in density. Contaminants are burned off to improve purity.	Cd, Pb Benzo-(a)-pyrene Sum of 4 PAHs: Benzo[b] fluoranthene, Benzo[k] fluoranthene, Benzo[ghi] perylene, Indeno[1,2,3-cd] pyrene	For elements, refer to Annex V. benzo-(a)-pyrene $MTC_{\text{tap}} = 0,001$ Sum of benzo[b] fluoranthene, benzo[k] fluoranthene, benzo[ghi] perylene, and indeno [1,2,3-cd] pyrene $MTC_{\text{tap}} = 0,01$	Lead and cadmium may be present only as impurities in small quantities that are technically unavoidable and have not been added intentionally. The content of these elements shall be less than 0,02 % (w/w) and has to be declared in the composition. First annealing at 600 °C to 1 000 °C; second annealing at up to 3 000 °C. For graphites that have been impregnated with an organic resin, the resin should be assessed separately based on the coating guideline.	31 December 2031		
2040	Ceramics	Ceramic materials made of carbon	Amorphous carbon layer	No specific composition requirements. These coatings may be produced using a number of different methods. This leads to the formation of crystalline layers of graphite and diamond.	Cd, Pb Benzo-(a)-pyrene Sum of 4 PAHs: Benzo[b] fluoranthene, Benzo[k] fluoranthene, Benzo[ghi] perylene, Indeno[1,2,3-cd] pyrene	For elements, refer to Annex V. benzo-(a)-pyrene $MTC_{\text{tap}} = 0,001$ Sum of benzo[b] fluoranthene, benzo[k] fluoranthene, benzo[ghi] perylene, and indeno [1,2,3-cd] pyrene $MTC_{\text{tap}} = 0,01$	Lead and cadmium may be present only as impurities in small quantities that are technically unavoidable and have not been added intentionally. The content of these elements shall be less than 0,02 % (w/w) and has to be declared in the composition.	31 December 2031

2042	Other inorganic materials	Mixed metal oxides	Mixed metal oxides (MMO) coatings of iridium oxide and tantalum oxide	IrO ₂ Ta ₂ O ₅	50 15	85 50	No migration tests required for Ir or Ta.		Used as coatings of titanium anodes. Maximum layer thickness: 20 μm .	31 December 2031

Notes:

1. Note 1: Explanation of the notes in Table 1

The meaning of the note provided in Table 1 is as follows:

A. Relevant chemical species are those identified in accordance in accordance with Section 3, Annex IV to Commission Implementing Decision (EU) 2024/365.

2. Note 2: Additional conditions of use

For the purposes of this positive list, for elements of relevance in the migration water corresponding $MTC_{\text{tap, inorganics}}$ values shown in Annex V for enamels, ceramic and other inorganic materials shall apply

ANNEX V
