# **COMMISSION DIRECTIVE 2003/95/EC**

### of 27 October 2003

## amending Directive 96/77/EC laying down specific purity criteria on food additives other than colours and sweeteners

(Text with EEA relevance)

THE COMMISSION OF THE EUROPEAN COMMUNITIES.

Having regard to the Treaty establishing the European Community,

Having regard to Council Directive 89/107/EEC of 21 December 1988 on the approximation of the laws of the Member States concerning food additives authorised for use in foodstuffs intended for human consumption (1), as amended by Directive 94/34/EC of the European Parliament and of the Council (2), and in particular Article 3(3)(a) thereof,

After consulting the Scientific Committee on Food,

### Whereas:

- (1)Directive 95/2/EC of the European Parliament and of the Council of 20 February 1995 on food additives other than colours and sweeteners (3), as last amended by Directive 2001/5/EC (4), lays down a list of substances which may be used as additives other than colours and sweeteners in foodstuffs.
- Commission Directive 96/77/EC (5), as last amended by (2)Directive 2002/82/EC (6), sets out the purity criteria for the additives mentioned in Directive 95/2/EC.
- (3) The Scientific Committee on Food concluded in its opinion of 6 May 2002 that the presence of ethylene oxide should be brought below the detection limit. Consequently, the relevant criterion of the existing purity criteria set out in Directive 96/77/EC needs to be adapted.
- It is necessary to adapt to technical progress the existing (4)purity criteria for E 251 sodium nitrate and E 459 betacyclodextrin.
- It is necessary to take into account the specifications and (5) analytical techniques for additives as set out in the Codex Alimentarius as drafted by the Joint FAO/WHO Expert Committee on Food Additives (JECFA).
- Directive 96/77/EC should therefore be amended accord-(6)ingly.
- The measures provided for in this Directive are in accor-(7) dance with the opinion of the Standing Committee on the Food Chain and Animal Health,

HAS ADOPTED THIS DIRECTIVE:

#### Article 1

The Annex to Directive 96/77/EC is amended as set out in the Annex to this Directive.

### Article 2

Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 1 November 2004 at the latest. They shall forthwith inform the Commission thereof.

When Member States adopt those provisions, they shall contain a reference to this Directive or shall be accompanied by such reference on the occasion of their official publication. Member States shall determine how such reference is to be made.

### Article 3

Products put on the market or labelled before 1 November 2004 which do not comply with this Directive may be marketed until stocks are exhausted.

## Article 4

This Directive shall enter into force on the 20th day following that of its publication in the Official Journal of the European Union.

## Article 5

This Directive is addressed to the Member States.

Done at Brussels, 27 October 2003.

For the Commission David BYRNE Member of the Commission

# **ANNEX**

The Annex to Directive 96/77/EC is amended as follows:

1. The text concerning E 251 sodium nitrate is replaced by the following:

### **'E 251 SODIUM NITRATE**

### 1. SOLID SODIUM NITRATE

Synonyms Chile saltpetre
Cubic or soda nitre

**Definition** 

Chemical nameSodium nitrateEINECS231-554-3Chemical formulaNaNO3Molecular weight85,00

Assay Content not less than 99 % after drying

Description White crystalline, slightly hygroscopic powder

Identification

A. Positive tests for nitrate and for sodium

B. pH of a 5 % solution

**Purity** 

Loss on drying

Nitrites Not mo

Arsenic Lead Mercury Not less than 5,5 and not more than 8,3

Not more than 2 % after drying at 105 °C for four hours

Liquid sodium nitrate is an aqueous solution of sodium nitrate as the direct result of the chemical reaction between sodium

hydroxide and nitric acid in stoechiometric amounts, without

Not more than 30 mg/kg expressed as NaNO<sub>2</sub>

Not more than 3 mg/kg Not more than 5 mg/kg Not more than 1 mg/kg

# E 251 SODIUM NITRATE

**Definition** 

# 2. LIQUID SODIUM NITRATE

ElQUE SUBJUM I MITALIE

súbsequent crystallisation. Standardised forms prepared from liquid sodium nitrate meeting these specifications may contain nitric acid in excessive amounts, if clearly stated or labelled.

Chemical name

Sodium nitrate

EINECS231-554-3Chemical formula $NaNO_3$ Molecular weight85,00

Assay Content between 33,5 % and 40,0 % of NaNO<sub>3</sub>

Description Clear colourless liquid

Identification

A. Positive tests for nitrate and for sodium

B. pH Not less than 1,5 and not more than 3,5

**Purity** 

Free nitric acid Not more than 0,01 %

Nitrites Not more than 10 mg/kg expressed as NaNO<sub>2</sub>

Arsenic Not more than 1 mg/kg
Lead Not more than 1 mg/kg
Mercury Not more than 0,3 mg/kg

This specification refers to a 35 % aqueous solu-

tion.'

2. The text concerning E 431 Polyoxyethylene (40) stearate, E 432 Polyoxyethylene sorbitan monolaurate (Polysorbate 20), E 433 Polyoxyethylene sorbitan monooleate (Polysorbate 80), E 434 Polyoxyethylene sorbitan monopalmitate (Polysorbate 40), E 435 Polyoxyethylene sorbitan monostearate (Polysorbate 60) and E 436 Polyoxyethylene sorbitan tristearate (Polysorbate 65) is replaced by the following:

### **'E 431 POLYOXYETHYLENE (40) STEARATE**

**Synonyms** Polyoxyl (40) stearate

polyoxyethylene (40) monostearate

A mixture of the mono- and diesters of edible commercial stearic acid and mixed polyoxyethylene diols (having an average polymer length of about 40 oxyethylene units) Definition

together with free polyol

Assav Content not less than 97,5 % on the anhydrous basis

Cream-coloured flakes or waxy solid at 25 °C with a faint Description

Identification

A. Solubility Soluble in water, ethanol, methanol and ethyl acetate. Inso-

luble in mineral oil

B. Congealing range 39 °C — 44 °C

C. Infrared absorption spectrum Characteristic of a partial fatty acid ester of a polyoxyethylated

**Purity** 

Water Not more than 3 % (Karl Fischer method)

Acid value Not more than 1

Saponification value Not less than 25 and not more than 35 Not less than 27 and not more than 40 Hydroxyl value

1,4-dioxane Not more than 5 mg/kg Ethylene oxide Not more than 0,2 mg/kg

Ethylene glycols (mono- and di-) Not more than 0,25 % Arsenic Not more than 3 mg/kg Lead Not more than 5 mg/kg

Mercury Not more than 1 mg/kg

Cadmium Not more than 1 mg/kg

# E 432 POLYOXYETHYLENE SORBITAN MONOLAURATE (POLYSORBATE 20)

**Synonyms** Polysorbate 20

Polyoxyethylene (20) sorbitan monolaurate

**Definition** 

A mixture of the partial esters of sorbitol and its mono- and dianhydrides with edible commercial lauric acid and condensed with approximately 20 moles of ethylene oxide per mole of sorbitol and its anhydrides

Content not less than 70 % of oxyethylene groups, equivalent to not less than 97,3 % of polyoxyethylene (20) sorbitan Assay

monolaurate on the anhydrous basis

Description A lemon to amber-coloured oily liquid at 25 °C with a faint

characteristic odour

Identification

A. Solubility Soluble in water, ethanol, methanol, ethyl acetate and

dioxane. Insoluble in mineral oil and petroleum ether

B. Infrared absorption spectrum Characteristic of a partial fatty acid ester of a polyoxyethylated

polyol

**Purity** 

Not more than 3 % (Karl Fischer method) Water

Acid value Not more than 2

Not less than 40 and not more than 50 Saponification value Hydroxyl value Not less than 96 and not more than 108

1,4-dioxane Not more than 5 mg/kg

Ethylene oxide Not more than 0,2 mg/kg

Ethylene glycols (mono- and di-) Not more than 0,25 %

Arsenic Not more than 3 mg/kg

Lead Not more than 5 mg/kg

Mercury Not more than 1 mg/kg

Cadmium Not more than 1 mg/kg

# E 433 POLYOXYETHYLENE SORBITAN MONOOLEATE (POLYSORBATE 80)

**Synonyms** Polysorbate 80

Polyoxyethylene (20) sorbitan monooleate

**Definition** A mixture of the partial esters of sorbitol and its mono- and dianhydrides with edible commercial oleic acid and condensed

with approximately 20 moles of ethylene oxide per mole of sorbitol and its anhydrides

Content not less than 65 % of oxyethylene groups, equivalent to not less than 96.5 % of polyoxyethylene (20) sorbitan Assay

monooleate on the anhydrous basis

Description A lemon to amber-coloured oily liquid at 25 °C with a faint

characteristic odour

Identification

Soluble in water, ethanol, methanol, ethyl acetate and toluene. A. Solubility

Insoluble in mineral oil and petroleum ether

B. Infrared absorption spectrum Characteristic of a partial fatty acid ester of a polyoxyethylated

polyol

**Purity** 

Water Not more than 3 % (Karl Fischer method)

Acid value Not more than 2

Saponification value Not less than 45 and not more than 55

Hydroxyl value Not less than 65 and not more than 80

1,4-dioxane Not more than 5 mg/kg

Ethylene oxide Not more than 0,2 mg/kg

Ethylene glycols (mono- and di-) Not more than 0,25 %

Arsenic Not more than 3 mg/kg

Lead Not more than 5 mg/kg

Not more than 1 mg/kg Mercury

Cadmium Not more than 1 mg/kg

# E 434 POLYOXYETHYLENE SORBITAN MONOPALMITATE (POLYSORBATE 40)

**Synonyms** Polysorbate 40

Polyoxyethylene (20) sorbitan monopalmitate

Definition

A mixture of the partial esters of sorbitol and its mono- and dianhydrides with edible commercial palmitic acid and condensed with approximately 20 moles of ethylene oxide per mole of sorbitol and its anhydrides

Assay Content not less than 66 % of oxyethylene groups, equivalent

to not less than 97 % of polyoxyethylene (20) sorbitan mono-

palmitate on the anhydrous basis

Description A lemon to orange-coloured oily liquid or semi-gel at 25 °C

with a faint characteristic odour

Identification

A. Solubility Soluble in water, ethanol, methanol, ethyl acetate and acetone.

Insoluble in mineral oil

Characteristic of a partial fatty acid ester of a polyoxyethylated B. Infrared absorption spectrum

**Purity** 

Water Not more than 3 % (Karl Fischer method)

Acid value Not more than 2

Saponification value Not less than 41 and not more than 52

Hydroxyl value Not less than 90 and not more than 107

1,4-dioxane Not more than 5 mg/kg

Ethylene oxide Not more than 0,2 mg/kg

Ethylene glycols (mono- and di-) Not more than 0,25 %

Arsenic Not more than 3 mg/kg

Lead Not more than 5 mg/kg

Mercury Not more than 1 mg/kg

Cadmium Not more than 1 mg/kg

# E 435 POLYOXYETHYLENE SORBITAN MONOSTEARATE (POLYSORBATE 60)

**Synonyms** Polysorbate 60

Polyoxyethylene (20) sorbitan monostearate

A mixture of the partial esters of sorbitol and its mono- and dianhydrides with edible commercial stearic acid and condensed with approximately 20 moles of ethylene oxide per mole of sorbitol and its anhydrides Definition

Content not less than 65 % of oxyethylene groups, equivalent to not less than 97 % of polyoxyethylene (20) sorbitan monostearate on the anhydrous basis

A lemon to orange-coloured oily liquid or semi-gel at 25 °C Description

with a faint characteristic odour

Identification

Assay

A. Solubility Soluble in water, ethyl acetate and toluene. Insoluble in

mineral oil and vegetable oils

Characteristic of a partial fatty acid ester of a polyoxyethylated B. Infrared absorption spectrum

polyol

**Purity** 

Water Not more than 3 % (Karl Fischer method)

Acid value Not more than 2

Saponification value Not less than 45 and not more than 55 Hydroxyl value Not less than 81 and not more than 96

1,4-dioxane Not more than 5 mg/kg Ethylene oxide Not more than 0,2 mg/kg Ethylene glycols (mono- and di-) Not more than 0,25 % Arsenic Not more than 3 mg/kg

Lead Not more than 5 mg/kg

Mercury Not more than 1 mg/kg

Cadmium Not more than 1 mg/kg

## E 436 POLYOXYETHYLENE SORBITAN TRISTEARATE (POLYSORBATE 65)

Polysorbate 65 **Synonyms** 

Polyoxyethylene (20) sorbitan tristearate

**Definition** A mixture of the partial esters of sorbitol and its mono- and

dianhydrides with edible commercial stearic acid and condensed with approximately 20 moles of ethylene oxide

per mole of sorbitol and its anhydrides

Content not less than 46 % of oxyethylene groups, equivalent Assay

to not less than 96 % of polyoxyethylene (20) sorbitan tristea-

rate on the anhydrous basis

Description A tan-coloured, waxy solid at 25 °C with a faint characteristic

odour

Identification

A. Solubility Dispersible in water. Soluble in mineral oil, vegetal oils, petro-

leum ether, acetone, ether, dioxane, ethanol and methanol

29 — 33 ℃ B. Congealing range

C. Infrared absorption spectrum Characteristic of a partial fatty acid ester of a polyoxyethylated

**Purity** 

Water Not more than 3 % (Karl Fischer method)

Acid value Not more than 2

Saponification value Not less than 88 and not more than 98

Hydroxyl value Not less than 40 and not more than 60

1,4-dioxane Not more than 5 mg/kg

Ethylene oxide Not more than 0,2 mg/kg

Ethylene glycols (mono- and di-) Not more than 0,25 %

Arsenic Not more than 3 mg/kg

Lead Not more than 5 mg/kg

Not more than 1 mg/kg Mercury

Cadmium Not more than 1 mg/kg' 3. The text concerning E 459 beta-cyclodextrin is replaced by the following:

## **'E 459 BETA-CYCLODEXTRIN**

Definition

Chemical name

EINECS Chemical formula Molecular weight

Assay

Description

Identification

A. Solubility

B. Specific rotation

**Purity** 

Water

Other cyclodextrins

Residual solvents (toluene and trichloroethylene)

Sulphated ash Arsenic Lead Beta-cyclodextrin is a non-reducing cyclic saccharide consisting of seven  $\alpha$ -1,4-linked D-glucopyranosyl units. The product is manufactured by the action of the enzyme cycloglycosyltransferase (CGTase) obtained from Bacillus circulans, Paenibacillus macerans or recombinant Bacillus licheniformis strain SJ1608 on partially hydrolysed starch.

Cycloheptaamylose

231-493-2

 $(C_6H_{10}O_5)_7$ 

1135

Content not less than 98,0 % of (C<sub>6</sub>H<sub>10</sub>O<sub>5</sub>)<sub>7</sub> on an anhydrous

basis

Virtually odourless white or almost white crystalline solid

Sparingly soluble in water; freely soluble in hot water; slightly soluble in ethanol

 $[\alpha]^{25}_{D}$ : +160 ° to +164 ° (1 % solution)

Not more than 14 % (Karl Fischer method)

Not more than 2 % on an anhydrous basis

Not more than 1 mg/kg for each solvent

Not more than 0,1 % Not more than 1 mg/kg Not more than 1 mg/kg'
